

Introduction: Storytelling with Mapping

Taught by: Ana Abraham and Chris McNulty
CLTL 4944 International Study: Peru
Monica Canavan
Summer 2022

Workshop Agenda

- Learn about KnightLab StoryMap as a mode of conveying data and content
- Consider best practices for creating your StoryMap
- Think about essential questions to ask before creating your StoryMap
- Walk through steps for using Knight Lab's StoryMap
- Start building a StoryMap

Slides and handout are available at: <https://bit.ly/su22-canavan-storymap>

Why use a “Map” to tell stories?

- StoryMaps help us render visualized, spatialized, and contextual information about spaces **in the past or today!**
 - StoryMaps can be about places you’ve never been to. The goal is to help users “see” the spaces/places/routes as accurately as possible, and to get a sense of the people and things in the environment.
- **Think about StoryMaps as giving directions.** Take a moment and consider how you got to class today, using words only.
 - What visual markers you would use to convey your movement in/across space to be here today?
 - How would a layperson know where to go? What if they don’t have the same geographical knowledge or reference points as you do?
 - How would it be useful if you combined text and images to help someone find their way?Can you think of some examples.

What are the limits?

- Maps certainly reflect the intention of the map-maker, but maps are also *inherently limited*.
 - Boston is as much a human idea as a physical space, and thus maps both represent and *create* reality. [Laura Herbert, [“What Do Maps Really Do?”](#)]
 - The simplicity and clarity of maps is deceiving, and we should question it. But the artificial clarity is necessary for the map to be *useful*. Think of the maps that are useful to you: they filter out the information that is less relevant to what you’re using the map for.

Big Picture: StoryMaps

StoryMaps are powerful teaching tools and rich archival artifacts.

Sometimes it's a matter of simple recording -- i.e., StoryMaps allow us to participate in the Archival process (by using images, descriptions, and other contextual data to generate scenes)

In other cases, it helps us learn a bit more about specific communities and how they lived.

Thinking Points: StoryMaps

StoryMaps are distinctive for their ability to combine narrative slides with each location on the map. Knight Lab encourages you to **devise a strong location narrative** so that the points on your map do not feel disconnected to the reader.

As you examine the examples, think through the following questions:

- What does this project reveal about what one can do with StoryMap?
- How did the projects present the narrative structure and geospatial layout? Or, how did the authors put space and place at the center of their story?
- How can these techniques be applied to your own project?

Example Projects Using Maps to Tell Stories

- [“El Parque Nacional del Manu”](#) : A project by former student Michelle Ngugi
- [“El Parque Nacional Volcan Baru”](#): A project by former student Megan Murchie
- [“Boston Parks and Playgrounds: Community Scan”](#): uses a mix of textual, image, and geo-location data to tell a story about playgrounds in Boston’s neighborhoods.

Example Projects Using Maps to Tell Stories

- [“Boston Parks and Playgrounds: Community Scan”](#): uses a mix of textual, image, and geo-location data to tell a story about playgrounds in Boston’s neighborhoods.
- [“Mapping Shared Spaces: A Visual History of Boston’s Black and Jewish Communities”](#): presents the story of migration of Boston religious communities by following the changing locations of places of worship.
- [“Commonwealth: A Offshore wind hub”](#): uses textual, image, video and geo-locations data to showcase key infrastructure of Massachusetts Clean Energy Center’s (MassCEC) Offshore Wind Energy Initiative.

StoryMap: Appearance & Key Functions

Making a StoryMap

Northeastern University
NULab for Texts, Maps, and Networks

StoryMap Building: Best Practices

- Think carefully about the **audience** you are trying to reach with your map. This will impact your language, the order of your points, and the media that you choose.
- Think also about the **tone of the map**: the default for StoryMap can be very upbeat and informal, and that may not match the content you are sharing (think, for example, about renaming the button that says "start exploring")
- **Test your map** after you have created it, to make sure that all the narrative points flow and that the language is clear and concise

Optional: Spreadsheet Template

Make a copy of the StoryMap template below and use it to fill in the different sites you want to map, images you want to include, and so on.

Important: make a copy, don't edit the main template!!

(Go to File > Make a copy)

[StoryMap Spreadsheet Template](#)

—Template based on the StoryMap Spreadsheet Template created by Molly Brown, Reference and Outreach Archivist, Northeastern University Library.

Gathering Data for your StoryMap

When collecting data for a group project, it is important to organize the data in one communal place, such as a Google spreadsheet. This will help you to:

- Keep track of your resources
- Add and edit collaboratively with your team
- Storyboard your map
- Communicate with Knight Lab in case of any issues (they ask for a spreadsheet as well as the webpage of the StoryMap)

1. The slide number can serve as the order in which your sites appear on your map and the site name can be used to label sites on your map

2. The site location is used to identify a point on your map where the site is physically located (address or coordinates)

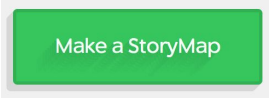

3. The image URL/File location is useful in keeping track of images of sites. Always credit your images to indicate their origin. Also include a caption describing your image

4. The headline can serve as the official title or label of your site. Including a narrative provides more context as to why your site is important.

5. Don't forget to cite your sources! Also, you may want to include additional media related to your site (e.g. newspaper clippings, additional photos, etc.)

Create a StoryMap

- Go to <https://storymap.knightlab.com/>
- Click “Make a StoryMap” 
- Either create a new account or sign in through Google
- Once you’re signed in, click “New Map” (once you have created your map, it will be there for you to work on)
- Name your project

Your StoryMap

slides here

Slides, or map markers

Each slide is a different marker point on your map/image. Each slide contains:

- Title and text. The text box reads basic HTML.
- A background image/color.
- A map marker, which can be placed using Google Maps locations or by placing the marker manually.
- Media: images, videos, and sound files can be uploaded. Since only *one* media file can be uploaded per slide, you can use the text box's HTML to integrate an image or another media type.

StoryMap Demo

[—Sample Map Link](#)

Add a Location

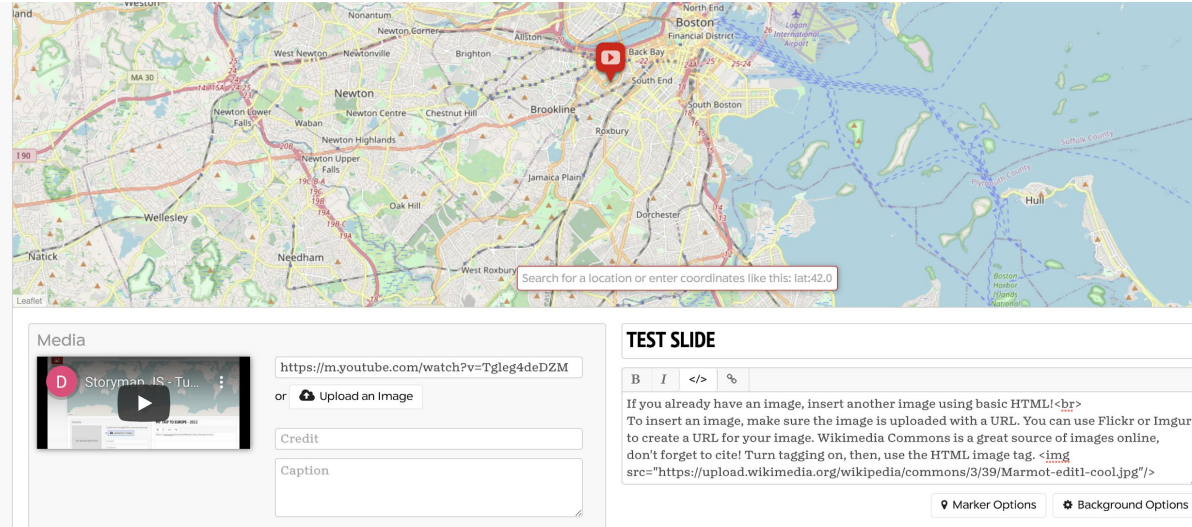

KnightLab StoryMap uses **Google Maps** to locate addresses

StoryMap, however, does **not** always recognize place names; you might need to know the **address** or location of particular structures

You can also **drag and drop the map markers** to the specific location

Add Media and Images to a Slide

Use “media” to upload files. You can upload an image or put a **URL** of an image OR a video (like a YouTube video). If you want to include your own video, you will first have to upload it to YouTube and copy that link.

If you have an image or a video in the “media” section, but want to include an image in the **text**, you can! The text box reads basic HTML.

1. Click the `</>` button (turn on HTML)
2. Get a URL of your image. Wikimedia Commons is a great source of images. Make sure to use the embed file code--don't forget to cite!
3. Use the HTML `` tag to insert the image.
4. Check the “Preview” to see the image

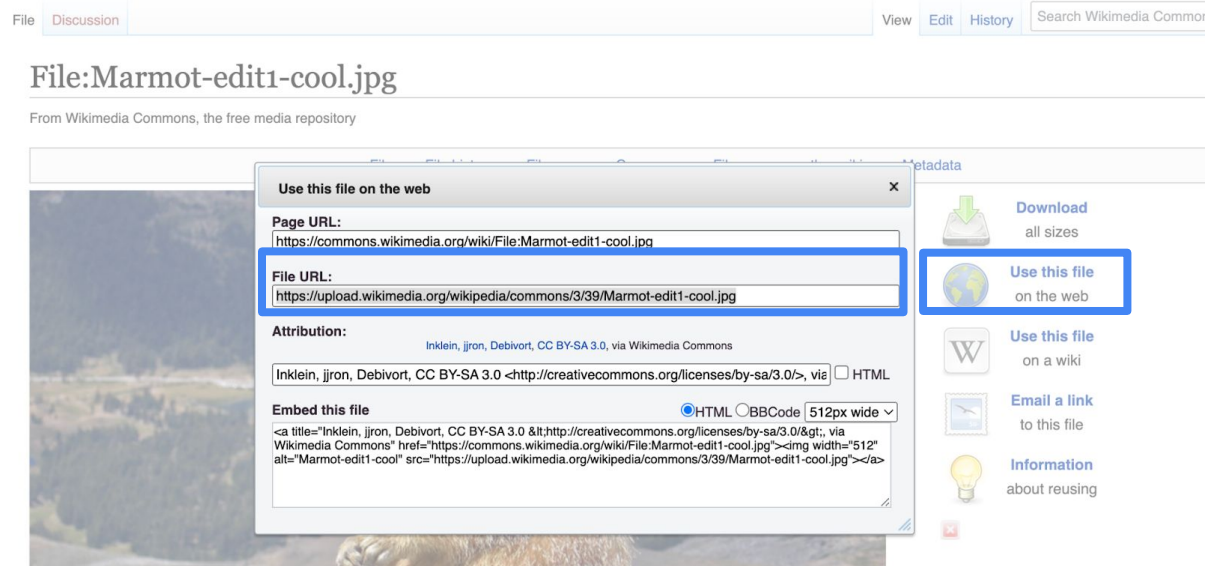

Embed codes and image files

If you are adding an image via its URL, make sure that you select the link with **the image file itself**, not just a page with the image on it.

For example, to add an image from Wikimedia Commons, follow these steps:

1. Go to "More Details" and choose "Use this file on the web," or just choose "Use this file on the web" if you see that option.
2. Copy the "File URL."

Add Google Street View to a Slide

As with other media, you can insert a Google street view map into a slide by entering its **URL**.

- Click “Share or embed image” from the menu, and copy the **HTML** link from the “Embed a map” tab.
 - Make sure the link has the `<iframe src=“URL”></iframe>` code (it should automatically, but the map won’t work without it!).
- Enter the URL into the “URL to your media” box.

Media

`<iframe src="https://www.google.com/maps/embed?"`

or  Upload an Image

Caption

Accepts [HTML](#)

A Note on Zoom Levels

Unfortunately, StoryMap does not let you set how far zoomed in or out your slides will be. The zoom level is determined automatically according to the distance between your locations: the closer the locations are to each other, the closer the zoom.

A Note on Save States

StoryMap does not keep older versions of your project, so once you make and save changes, **you cannot retrieve a previous version.** You can also write over new content if you have your StoryMap open in multiple browser tabs or windows at once.

This is one reason why it is a good idea to plan out your StoryMap in a separate document: if you lose progress, you will have your content saved somewhere else.

Hands-On Demo: Black Heritage Trail

Identify **your** hands-on practice and troubleshooting needs—this practice time should work for **you**!

1. Select the **handout** “Black Heritage Trail Demo” and **create a new map**
2. Practice setting up **map markers**
3. Practice adding **video or images** to your markers
4. Try using HTML to embed an image to your map

Thank you!
