

Gathering Data for Mapping: KnightLab StoryMap

Developed by Colleen Nugent for
HIST 1130 Introduction to US History
Gretchen Heefner
Fall 2020

Workshop Agenda

- Learn about StoryMap as a mode of conveying data and content
- Best practices and questions to consider before creating your StoryMap
- Start collecting data for your map!

Slides, handouts, and data available at

<http://bit.ly/diti-spring2020-poe>

Workshop Objectives

- Articulate particular choices you will make when telling a story using a map
- Learn about the concept and uses of a StoryMap
- Follow a template for gathering data to be used in Knight Lab's StoryMap

What is a “story map”?

Telling a **story** using **maps**!

“You combine authoritative maps with narrative text, images, and multimedia content. They make it easy to harness the power of maps and geography to tell your story.”

- ESRI Story Maps Website

Example Projects Using Maps to Tell Stories

[Angelenos Incarcerated, Eddie's Story](#): uses a map to both linearly and spatially tell someone's story based on an interview (made using Omeka's Neatline)

KnightLab StoryMap examples:

- [“Boston Parks and Playgrounds: Community Scan”](#): uses a mix of textual, image, and geo-location data to tell a story about playgrounds in Boston's neighborhoods.
- [Arya's Journey in Game of Thrones](#): uses an image of Westeros to trace and tell the story of Arya's journey

Analysis of Examples

- Look through these examples and think about how they use the narrative structure and geospatial layout of story maps to present information.
- Make some notes about how you interacted with these maps.
- Can these techniques be applied to your own project?
- What worked best? What didn't work for you?

Gathering Data for your StoryMap

When collecting data for a group project, it is important to organize the data in one communal place, such as a Google spreadsheet. This will help you to:

- Keep track of your resources
- Add and edit collaboratively with your team
- Storyboard your map

StoryMap Spreadsheet Template

Make a copy of the StoryMap template below and use it to fill in the different sites you want to map, images you want to include, and so on.

Important: make a copy, don't edit the main template!!

(Go to File > Make a copy)

[StoryMap Spreadsheet Template](#)

—Template based on the StoryMap Spreadsheet Template created by Molly Brown, Reference and Outreach Archivist, Northeastern University Library.

Spreadsheet data collection

1. The slide number can serve as the order in which your sites appear on your map and the site name can be used to label sites on your map

2. The site location is used to identify a point on your map where the site is physically located (address or coordinates)

3. The image URL/File location is useful in keeping track of images of sites. Always credit your images to indicate their origin. Also include a caption describing your image

4. The headline can serve as the official title or label of your site. Including a narrative provides more context as to why your site is important.

5. Don't forget to cite your sources! Also, you may want to include additional media related to your site (e.g. newspaper clippings, additional photos, etc.)

Data organization

Organizing your data first can help you stay organized and keep track of your resources. It's a quick way to storyboard your project, making sure that your flow between locations makes sense, your writing is consistent, and you have the right amount of research and info at each location.

When you are ready to add your data, you can copy and paste from your spreadsheet.

Next Steps

Begin to gather your data about sites, including images, descriptions, and citations. For the next session, you should have collected at least 4 sites.

In the next session, we will cover how to start building your StoryMap using your data.

Thank you!
