during the presentation!*

Activity: Highlighting Themes

With a partner:

- read the sample transcript excerpt on your handouts
- come up with three themes you might want to highlight from this text; these themes should be about 1-3 words (ex: expenses, resource access)
- underline the moments in the passage that reflect these themes

We will then have a discussion about what themes you highlighted and why.

Workshop Agenda

- Workshop objectives
- Qualitative Coding: annotating and highlighting sources
- What is NVivo?
- Important vocabulary and functions
- NVivo demonstration
- Hands-on activity

Slides & handouts at http://bit.ly/diti_fall2020-marshall3

Workshop Objectives

- Define qualitative coding and why it can be useful while doing research
- Understand what NVivo is as a research tool and what it can do
- Learn important NVivo-specific vocabulary to aid independent research

Qualitative Coding

In our beginning activity, we practiced a form of **qualitative coding** together.

Qualitative coding is when you create a list of themes, or a **schema**, that you want to analyze in a primary/secondary source. Then, you review those sources and highlight particular moments from the text according to those themes.

Coding in practice

key, at that point.

M: Sure sure, so I did not understand, what was the comparison with other five, with other locals, did they have more issues or less, or did they also have that similar experiences like you, across all those different locals [26]

R1: They had, you know, similar experiences that I did. Very strong, present, you know, walking. I didnt see hear, early on, anyways for the initial, when we pulled them that day, the Thursday, that anyone was saying "i'm not going". Didnt hear that from anybody. Didnt hear it from my local, didnt hear it, you know because all the locals have facebook pages too. You know, they have, social pages, so you can also keep in touch that way, and, you know, between reading and [unclear], you know talking to [unclear] and stuff like that, we were hearing nothing but positive feedback, on on, people walking. People were ready. They were angry, with the contract that was being presented, and they were ready, they were ready to take it, to go to the sidewalk [27] so to speak. And then, and to state their point, yep.

M: Can I maybe ask you yes, related to that anger, like, how did people, hm how to say, how did they precisely rationalize their anger, or, how did they justify their anger. What did they say, who, or how did they understand, why that injustice was being done to them. How did they understand why the managers at all decided to offer them such a bad contract, how did they think about that anger?

R1: Sure. So, with that, when we, when we, with the organizer, we met earlier, weeks earlier to, so, we met up in [unclear], the organizer brought as many - you know, every, its open invitation, to any local member of the store, to come to this, rather large gathering of people [28] where he broke down the contract. So, not only if you couldn't make, these contract breakdowns came back to the store, and were handed out to, individuals to read, and were posted on the union board. So, the people had time to see, what the contract, you know, here

What is NVivo?

NVivo is a **text analysis** and **research organization** software that is available through MyNU. NVivo provides methods for you to annotate and code documents using user-created tags (nodes/codes), summarize and visualize these codes, and organize research materials.

NVivo is particularly helpful for organizing and annotating research materials such as:

- secondary sources: scholarly articles you read for the literature review, newspaper articles, book chapters.
- primary sources: any primary sources you may be analyzing such as interview transcripts, texts, or field notes
- your own notes about your project (you can even compose in NVivo)

What can NVivo do?

NVivo is designed for qualitative coding research materials, such as survey results, interviews, audio recording, text documents, articles, and other data formats. It also has other functions:

- create projects that store, organize, and code documents/files
- provide a method for you to code your documents with a user-created coding schema (nodes)
- query, summarize, organize, and visualize information about your coding
- conduct forms of computational text analysis, like word counts, on the documents themselves

NVivo for Annotating & Coding Research

With NVivo, you can store and organize your **primary** and **secondary** sources together (most file types work, including images). You can also separate your different types of research materials. For this project, your research materials are your interview transcriptions.

NVivo also allows you to **annotate** texts and use **qualitative coding** methods to highlight specific texts/images/pieces under themes.

Then you can **summarize** and **visualize** these annotations and codes.

NVivo is NOT cross-platform friendly

The Mac and PC versions of Nvivo—as well as the version numbers—are different and have different file types.

- Mac NVivo projects end in .npvx and can only open that file project type
- Windows NVivo projects end in .npv, but can open both .npv *and* .npvx
- Version numbers (10, 11, 12) also impact which projects can be opened on which platform

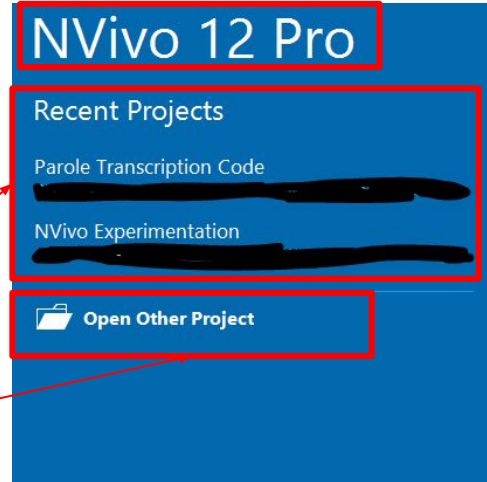

Anatomy of NVivo: Opening on Windows

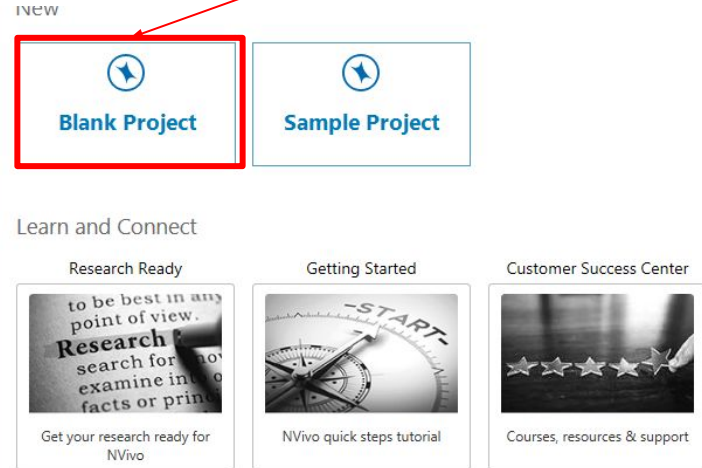

Your version number (you should have version **11** or **12**)

The recent projects you opened

Open another project that is not recent

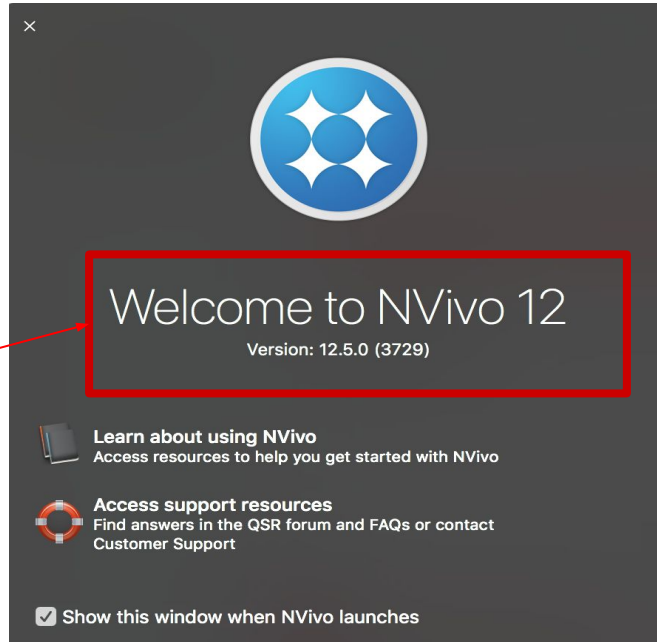

Create a new **project** (stores all your documents, codes, etc)

Anatomy of NVivo: Opening on Macs

Your version number (you should have version 11 or 12)

- Create new project
Create a new project
- Create a copy of the sample project
Explore and experiment with NVivo using the sample project

Create a new **project** (stores all your documents, codes, etc)

- Parole Trans Code_...sion (NVivo 12).npx
~/Downloads
- TEST.npx
~/Documents
- Untitled.npx
~/Documents
- Sample Project.npx.npx

NVivo Vocabulary

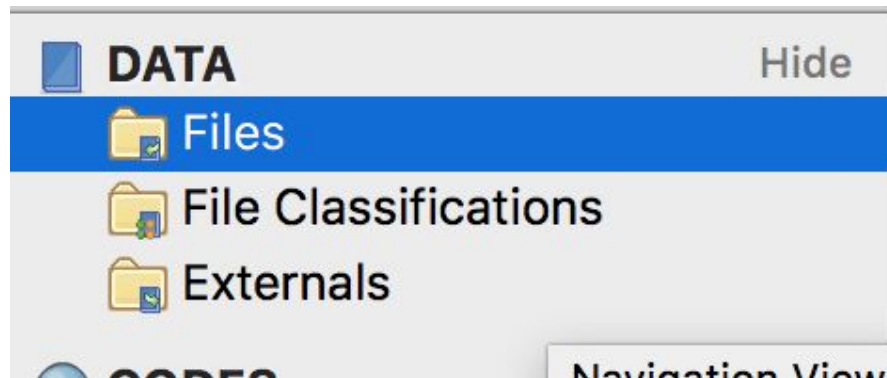

Full definitions available on the handout

- **Data:** your research documents & files
- **Codes:** the method to annotate the themes/concepts
- **Nodes:** the actual themes/concepts that you create
- **Relationships:** coding connections between two data items
- **Cases:** units of analysis for your research.
- **Maps:** visualization tool to see connections between the cases and nodes
- **Query:** a flexible way to explore and analyze your files, cases, and nodes

Data

The “Data” in NVivo are all the research materials you are using (scholarly articles, transcriptions, newspapers, research notes, etc.).

“Files” will be where you can access all the research materials you have imported into this project.

Important Reminders

NVivo can import all types of files, including .docx, .pdf, .doc, .csv, .png, .jpeg, .txt, video/audio files, and more.

You should always **save** your original documents on your local computer or in cloud storage, even if these documents are imported into NVivo. NVivo can store documents, but it is more of an organization and analysis tool, rather than a storage option.

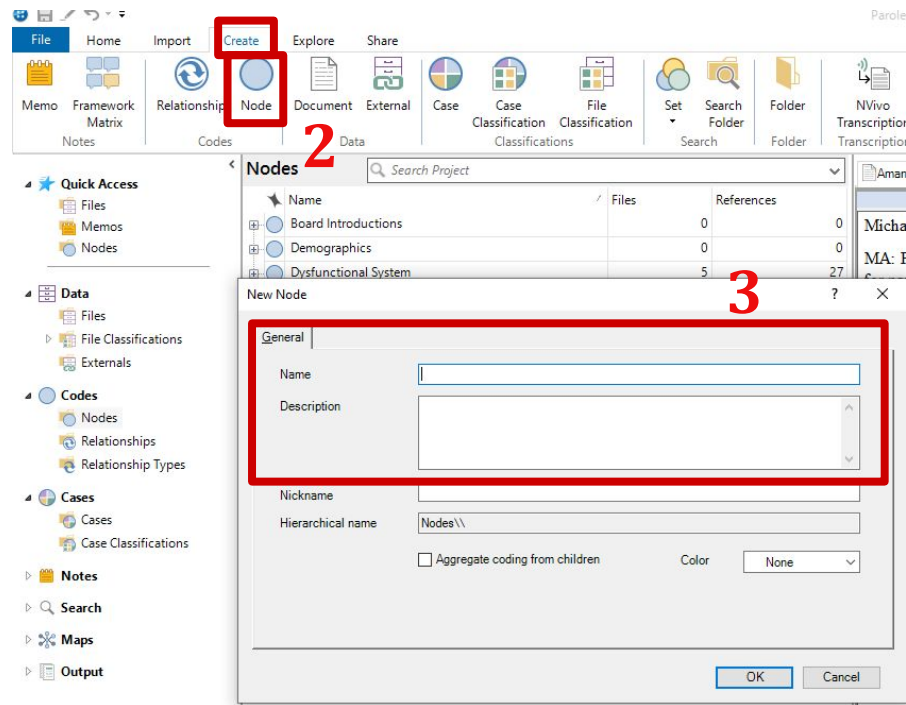

Codes and Nodes

The list of nodes you will use to code your files. The “nodes” folder will be empty until you add your own! You can add nodes and sub-nodes

Creating Nodes (Windows) 1

1. Go to “Create” in the toolbar
2. Click “Node”
3. Your new node will pop up and ask for a name and description
 - a. To add a *subnode*, follow the same steps, but click on the original node where you want to add the subnode

Creating Nodes (Macs)

1. Go to “Create” in the toolbar
2. Click “Node”
3. Your new node will pop up and ask for a name and description
 - a. To add a *subnode*, follow the same steps, but click on the original node where you want to add the subnode

Coding Files/Documents (Windows)

1. Open the file you would like to annotate
2. Highlight the text you want to code
3. Drag and drop the selection onto a node
4. Alternatively, you can Command/Control+click and select “Code”
5. You can also add new nodes/cases as you annotate

Coding Files/Documents (Macs)

1. Open the file you would like to annotate
2. Highlight the text you want to code
3. Command/Control+click and go to “Code Selection”
4. Click “At Existing Nodes or Cases”
 - a. Once you use nodes, the nodes will show up when you click “Code Selection”
 - b. You can also add new nodes/cases as you annotate

View Your Codes (Windows)

1. Go to “Document” in the toolbar
2. Click “Highlight” then “All Coding”
3. Click “Coding Stripes” and “All Coding” to see the code names and where they appear in the document.
 - a. If you have tagged an entire file as a “case,” everything will be highlighted. Simply choose “Coding for Selected Items”

The screenshot shows the NVivo 12 Pro interface. The 'Document' toolbar is at the top. The 'Highlight' menu is open, showing 'All Coding' selected. The 'Coding Stripes' sidebar is on the left, showing a list of codes. The main document window shows a transcript with highlighted text segments corresponding to the codes in the sidebar.

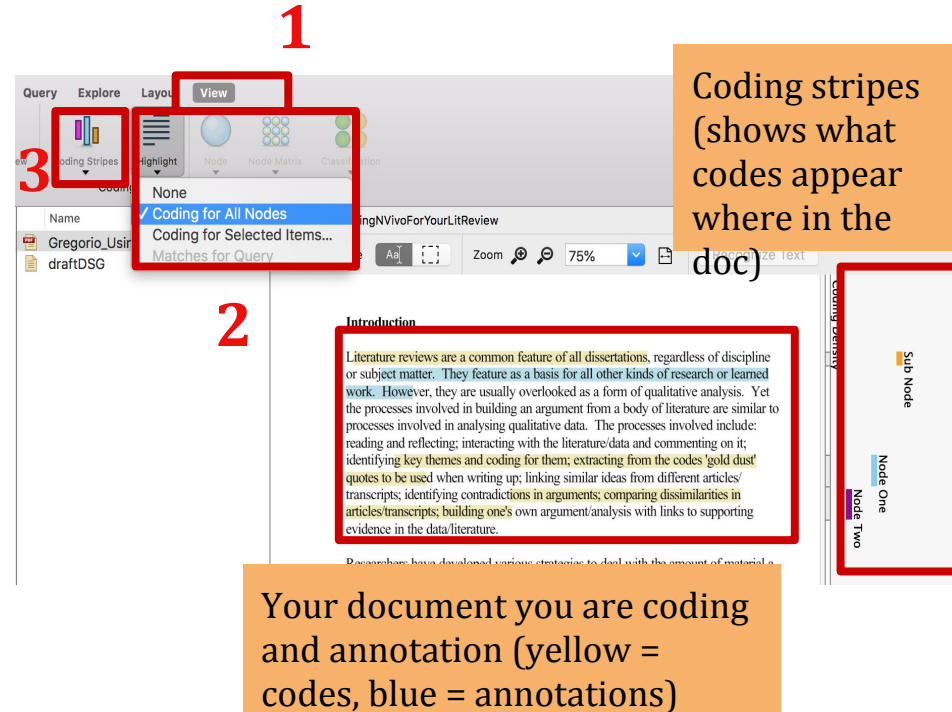

Coding stripes
(shows what codes
appear where in
the doc)

The document you are coding and annotations

View Your Codes (Macs)

1. Go to “View” in the toolbar
2. Click “Highlight” then “Coding for All Nodes”
3. Click “Coding Stripes” and “All Nodes Coding” to see the code names and where they appear in the document.
 - a. If you have tagged an entire file as a “case,” everything will be highlighted. Simply choose “Coding for Selected Items”

The screenshot shows the NVivo software interface. A red box labeled '1' highlights the 'View' menu in the top toolbar. A red box labeled '2' highlights the 'Highlight' submenu, which is open, showing options like 'None', 'Coding for All Nodes', 'Coding for Selected Items...', and 'Matches for Query'. A red box labeled '3' highlights the 'Coding Stripes' button in the toolbar. An orange text box on the right says 'Coding stripes (shows what codes appear where in the doc)'. Another orange text box at the bottom says 'Your document you are coding and annotation (yellow = codes, blue = annotations)'. The main document window shows a text excerpt with yellow highlights and blue annotations. A sidebar on the right shows a list of nodes: 'Sub Node', 'Node One', and 'Node Two'.

Annotating Files (Windows)

To annotate (comment), follow the same steps as coding except click “New Annotation” instead after you highlight and Command/Control click. Find all your annotations in the “Notes/Annotations” section in the left menu

The screenshot shows the software interface with the following components:

- Left Menu:** A sidebar with sections like Quick Access, Data, Codes, Cases, and Notes. The 'Notes' section is highlighted, showing sub-items: Memos, Framework Matrices, Annotations, and See Also Links.
- Annotations List:** A table titled 'Annotations' with columns 'File Name' and 'Number'. It lists 'Amann_Reasons Transcription' with the number '1'.
- Document View:** A text document titled 'Amann_Reasons Transcription' with a 'Click to edit' button. A paragraph of text is highlighted in orange, and a red box indicates the text being annotated.
- Annotation Table:** A table at the bottom titled 'Annotations' with columns 'Item' and 'Content'. It shows '1' and 'This is an annotation'.

being incarcerated for thirty plus years, I entered a sexual offender treatment program. While I was in this program, I took as many classes as possible. I have come to (inaudible) and I know (inaudible) as a child with aggression, and the punitive environment that I lived in, that allowed to inflict pain on myself and as well as on others. My belief system (inaudible). My feeling good about myself depended on my codefendant approving what I did. I thought I needed his approval and sought out his elevation at any cost, to a point I did not feel accepted without his approval. (Inaudible) towards females, whether I liked them or not, to make sure that he would not leave me. Through the program I have come to understand that why alcohol and substance abuse has been a major issue in my life. Growing up in an alcoholic household. I believed that it was normal to use alcohol to escape from reality or when problems arise. I also see how alcohol contributed to my anger reaching to a physical level. All of these programs, I have made genuine changes and integrated them into my everyday life and living. I realized that I cannot change on my own or be afraid to ask for help. They began to restore my capacity to be emotionally connected... and while at the sex offender treatment program, I have learned to trust myself and if I had a problem, who to go to and who not to. I know I must always be aware of my (inaudible), at all times. I am able to channel my thoughts and release, where I was not able to in the past. On parole, I will continue to attend AA and NA groups, SOTP classes and (inaudible). I know I will never be able to show my victim how sorry I am or how I have changed but if I am released on parole, I will show that someone like me can and will be a responsible member of society.

Memos (Windows)

- Memos are more extended write-ups of your analytical insights
- They can stand alone, but also be linked
- “Memo link” - linking memo to a particular file, case, or node

The screenshot displays the NVivo software interface. On the left, the 'Notes' section is expanded, showing 'Memos', 'Framework Matrices', 'Annotations', and 'See Also Links'. A red box highlights the 'Memos' folder. In the center, a context menu is open for a selected node, with the 'Memo Link' option highlighted. A red arrow points from an orange callout box to this option. Another orange callout box points to the 'Memo Link' option in the 'Notes' sidebar. The main window shows a list of nodes and their references. The bottom status bar indicates '31 Items'.

Option to link the memo to a node

Memo links (Windows)

Showing the link between the file and the memo

Accessing the memo from the file

Memos and memo links (Mac)

Navigating memo creation

Menu where memos are located

Option to link the memo to a node

The screenshot shows the software's top menu bar with 'Create' highlighted. A red box around 'Create' points to an orange callout. Another red box around 'Memo' in the 'Create' dropdown points to the same orange callout. A third red box around 'Memo Link' in the 'Create' dropdown points to an orange callout. The left sidebar shows 'NOTES' with 'Memos' highlighted. The main panel shows a list of nodes, with 'Fulbright activities (c)' selected.

Showing the link between the file and the memo

Accessing the memo from the file

The screenshot shows the software's top menu bar with 'Create' highlighted. A red box around 'Memo Link' in the 'Create' dropdown points to an orange callout. Another red box around 'Link to Existing Memo...' in the 'Memo Link' submenu points to an orange callout. The left sidebar shows 'NOTES' with 'Memos' highlighted. The main panel shows a list of nodes, with 'Fulbright activities (c)' selected.

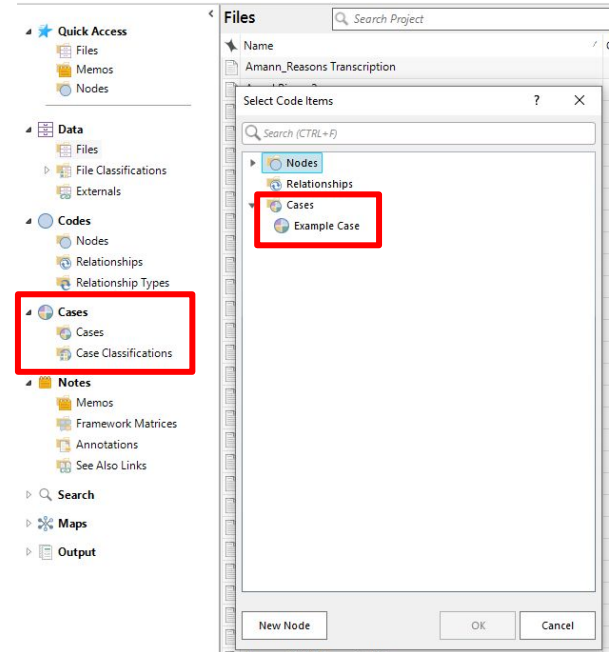

Cases (Windows)

Cases are the types of research texts in your project; they can be organized based on your selections. **“They might represent people, places, events, organizations or other entities that you want to analyze and compare.”** For example, if you have several transcripts from different trials, but want to categorize the type of trial for each text, you would use cases to do so.

-“About Cases”, [NVivo](#)

To add a “case” to a file, it’s the same method as adding a node, except you choose the “Cases” folder and the proper case.

To add a “case” to a file, it’s the same method as adding a node, except you choose the “Cases” folder and the proper case.

Cases (Macs)

Querying

Querying, or asking something from your data, in NVivo provides multiple ways to explore both your codes and your texts.

- **Word Frequency:** Counts the number of times words (with stopwords removed) appear in one or more files
- **Coding:** Shows the number of codes, the text that was coded, and the files
- **Crosstab:** cross-references nodes and case classifications. For example, you might want to know how often a particular node appears in both scholarly articles and your primary texts.

“Query” can be found in the “Explore” Tab

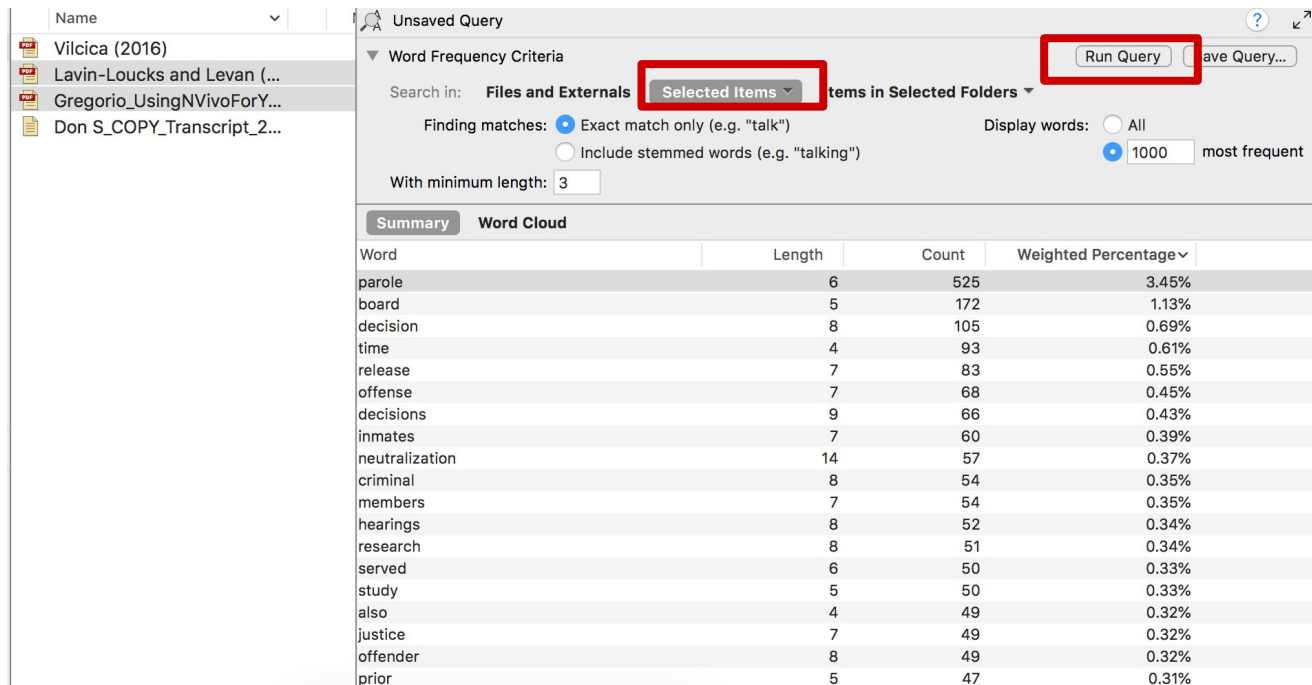

To query multiple items, select the items you would like to query in the “Selected Items” tab and then click “Run Query”

Feel free to ask questions at any point during the presentation!

Word Frequency Example (Mac)

Select the items you would like to query in the “Selected Items” tab and then click “Run Query”

Word	Length	Count	Weighted Percentage
parole	6	525	3.45%
board	5	172	1.13%
decision	8	105	0.69%
time	4	93	0.61%
release	7	83	0.55%
offense	7	68	0.45%
decisions	9	66	0.43%
inmates	7	60	0.39%

Qualitative Coding is about *Interpretation and Arguments*

The nodes you create are **arguments** themselves; you are choosing what information you value and want to extract from the transcripts

Showing and Interpreting your work

You can take **screenshots** or save your results from queries to show your work as you're researching, organizing, annotating, and coding your sources.

Use these results to emphasize your argument.

For example, if you're interested in understanding food access at Northeastern, you might look at how often did your interviewee mention food. How is food mentioned? What are the connections between food and first year experiences?

Your Turn

Using your interview transcripts, practice:

- inputting the documents
- creating nodes/cases
- coding the documents
- visualizing your codes

Find these slides at http://bit.ly/diti_fall2020-marshall3

Group Discussion

- What did you find surprising or interesting in your exploration of the tool?
- What are some challenges you faced? How might you work with these as you move forward?
- How else might you use NVivo in your future studies/career?

Thank you!
