Introduction to Podcasting and Audacity

Key Terms

- **Track:** a single audio channel or stream.
- **Multi-track:** an audio recording or channel with more than one track or recording of sound. This is another term is multimedia.
- **Clipping:** splitting audio into separate sections or making “clips”
- **White Noise/Ambient Noise:** the background noise in a particular room is picked up when recording. This can include machines hums, talking, or sounds from the surroundings (i.e. cars and people).
- **Mixing:** the process of audio production, or mixing tracks of recordings, music, and other desired media.
- **MP3 File:** the most general audio file. Others include .wav, .mp4, etc.

Audacity

Audacity is a free, easy-to-use, multi-track audio editor and one of the more popular free audio-editors used for creating podcasts. It can be used with Windows, Mac, Linux, and most other operating systems.

Audacity 101

- Click on the red button to record your track!
- To edit out sections of your recording, just select the part of your track you want to remove, then hit “delete” on your keyboard.
- You can split tracks by selecting the point in the clip you wish to divide, then go to Edit > Clip Boundaries > Split.
- You can move tracks by dragging and dropping them with your mouse.
- Save your project by going to File > Save Project > Save Project (or Save Project As, if you are just creating your podcast project).
- Finished? Export your project before sharing your recording! Go to File > Export > Export as an MP3.
