Retrieving and Preparing Mapping Data in Excel

About

This handout provides instructions for installing Excel on your computer and using Northeastern's license. For more information, visit <http://bit.ly/2kDkYsL>—Northeastern's ITS Guide

Install Excel

- Go to the Office 365 (<https://office.com>) and enter your Northeastern email. You will be redirected to Northeastern's Office 365 portal, where you can enter your email and password (same as your husky email)
 - Each student gets two emails: their Husky email and their Northeastern email. Your Northeastern email has the same beginning as your Husky email, but ends with @northeastern.edu
- Once you're signed in, click "Install Office" in the top right corner and "Office 365". Excel is in this package.
- Follow the directions to download and install the Microsoft Suite

Use Northeastern's License

- Open your newly installed Microsoft Excel
- Accept the license agreement and sign in with the **same email and password** you used to sign into the Office 365 (lastname.i@northeastern.edu)
